

Simplifying Quadratic Expressions

scan for answers

Chapter 7: Worksheet 5

Level 1 - Simplify fractional expressions with a quadratic in the numerator

Level 2 - Simplify expressions with a quadratic numerator and denominator

Level 3 - Simplify expressions by removing a common factor first

Level 1

Simplify the fractional expression.

a) $\frac{x^2 - 4x + 4}{x - 2}$

b)

c)

Level 2

Simplify the fractional expression.

a) $\frac{x^2 + 5x + 6}{x^2 + 2x + x}$

b)

c)

Level 3

Simplify the fractional expression.

a) $\frac{2x^2 - 4x - 6}{4x^2 + 12x + 8}$

b)

c)
